

1- Clone repo somewhere in your repo.

```
alicana@alicana2 MINGW32 ~/Desktop
$ git clone https://github.com/alicanalbayrak/modern-jogl-examples.git
Cloning into 'modern-jogl-examples'...
remote: Counting objects: 2753, done.
remote: Compressing objects: 100% (205/205), done.
remote: Total 2753 (delta 85), reused 0 (delta 0), pack-reused 2536
Receiving objects: 100% (2753/2753), 37.21 MiB | 735.00 KiB/s, done.
Resolving deltas: 100% (1649/1649), done.
Checking connectivity... done.
```

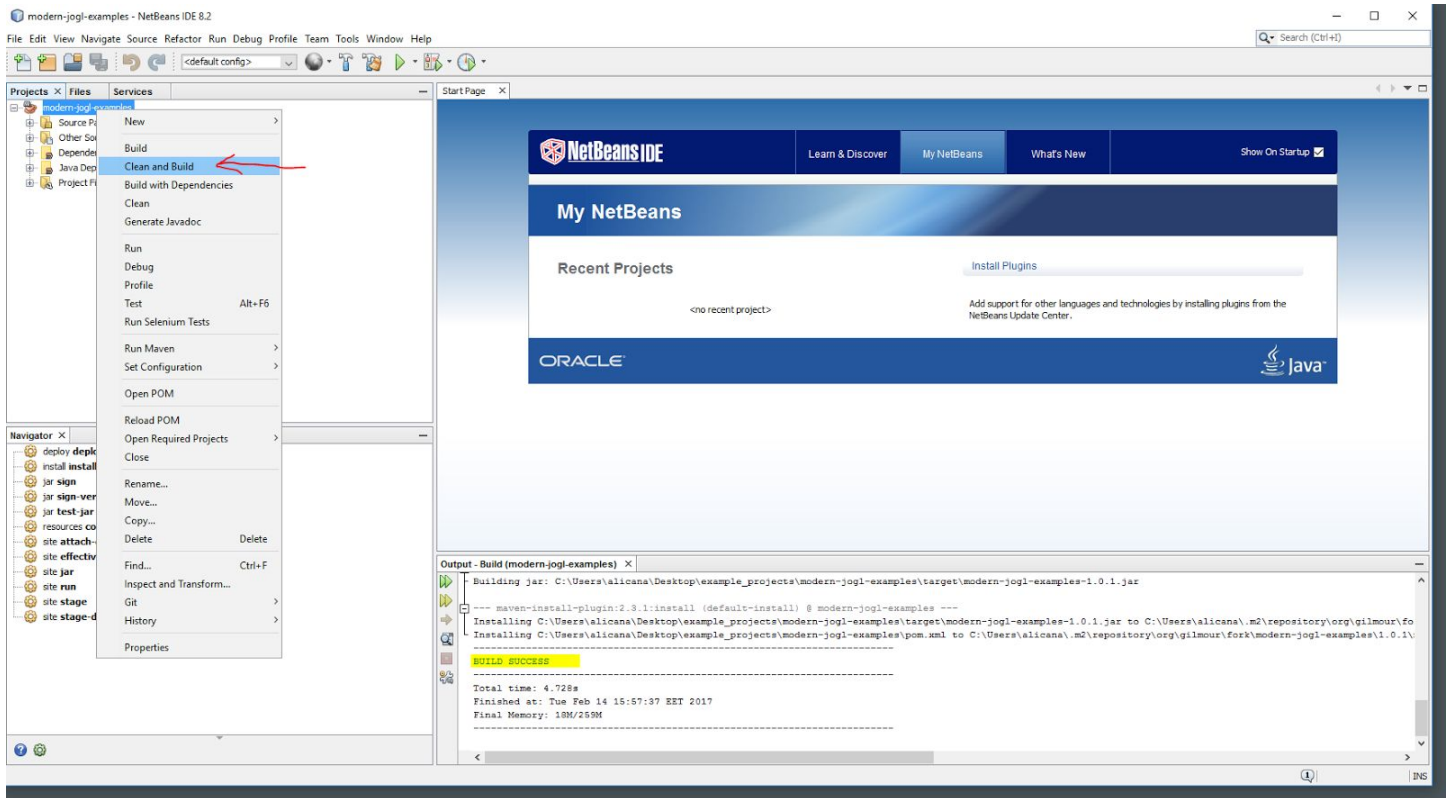

2 - Open NetBeans and choose “Open File” (or just type Ctrl + Shift + O)

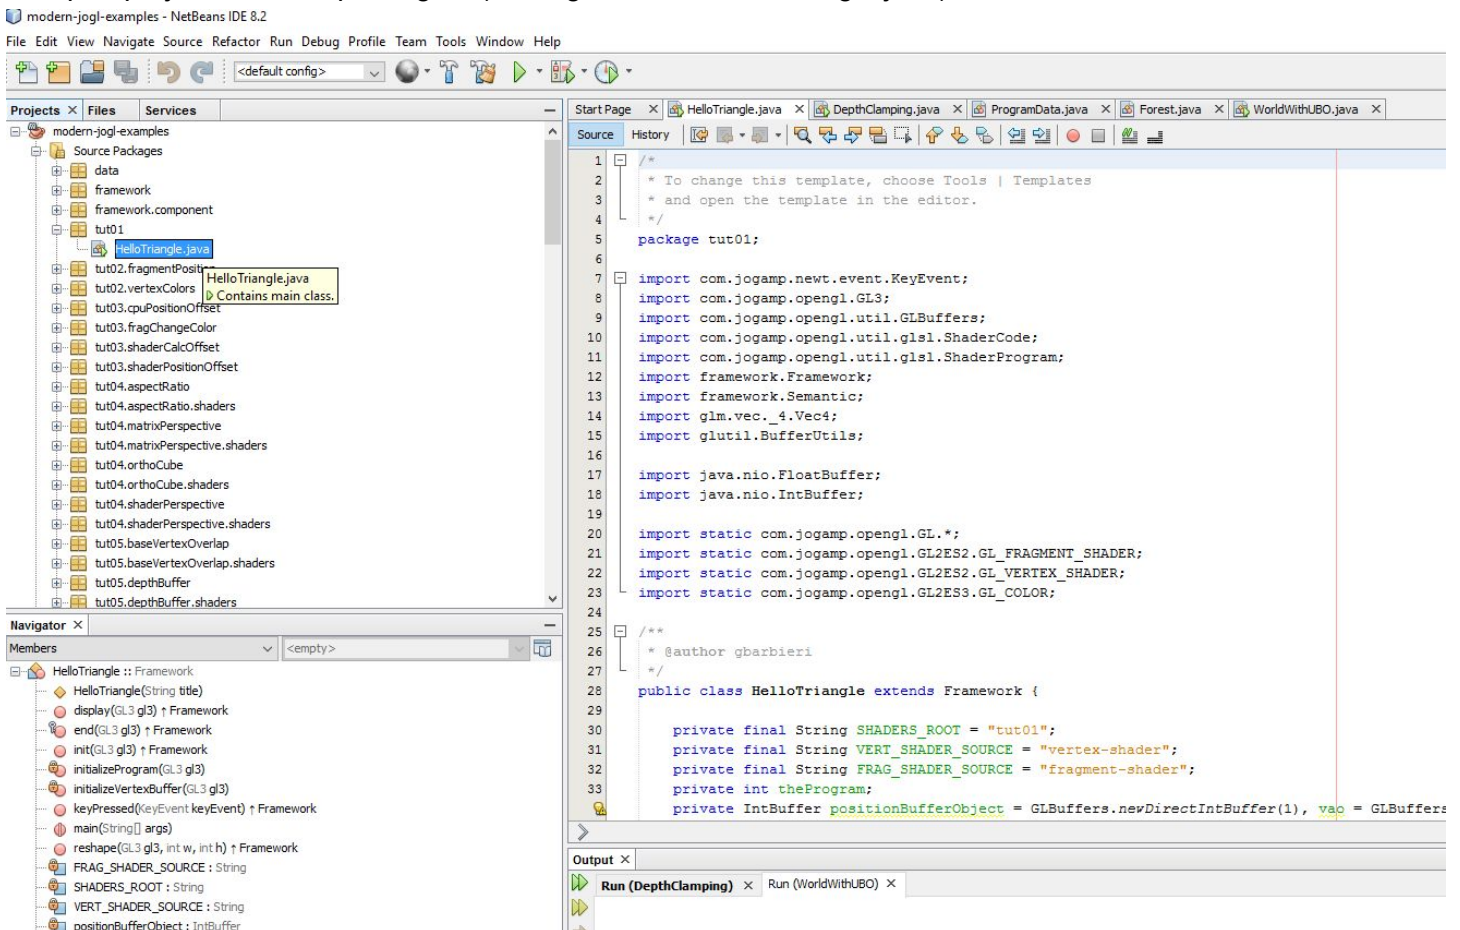

3 - Navigate to the project you just cloned. (NetBeans already marked it as a maven project.)

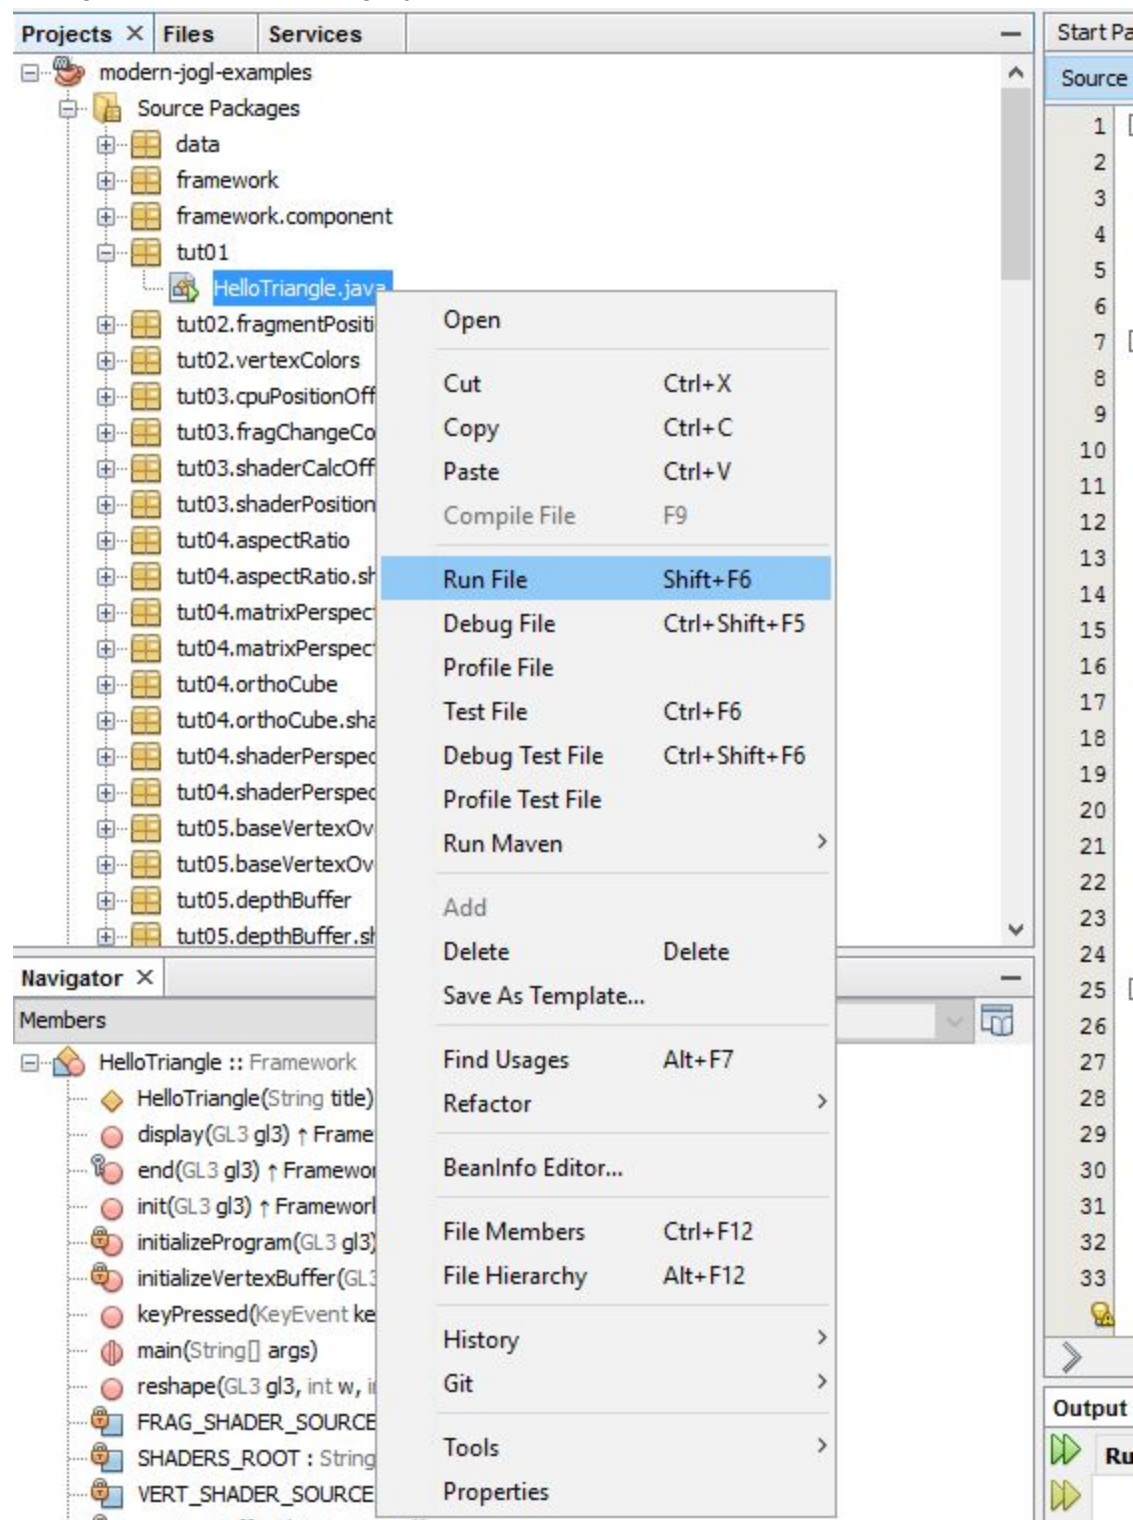

4 - Right click project and select "Clean and Build".

5 - Open project's source packages. (For e.g. .../tut01/HelloTriangle.java)

6 - Right click to HelloTriangle.java

7 - Finally you should be able see results something like this.
